Full Stack Web Developer and Systems Thinker with expertise in Next.js, React, Node.js, and Supabase, currently serving at TESDA Regional Operations Division. I focus on optimizing systems and workflows to deliver scalable, efficient, and transparent digital solutions—viewing technology as a set of tools rather than the end goal. Rather than memorizing syntax, I prioritize understanding architecture, problem-solving, and process improvement, enabling me to build impactful systems that save the agency significant time, money, and resources.

Experience

I.T. Systems Developer

TESDA Regional Operations Division – Cebu, Philippines

March 2023 – Present

Led the full-stack design and development of multiple large-scale digital systems that modernized TESDA's workflows and operations. Spearheaded in-house development efforts using Next.js, React, Node.js, and Supabase, optimizing efficiency, automation, and data transparency. Successfully delivered end-to-end digital transformation initiatives that saved the agency significant time, money, manpower, and resources by eliminating reliance on external contractors.

- Regional Dashboard – Built a real-time dashboard visualizing TESDA's performance metrics across provinces with automated data aggregation, analytics, and role-based access control.
- Document Management System (DMS) – Developed a secure cloud-based routing and approval system featuring digital signatures, version control, and audit logging to replace paper-based workflows.
- NTTC Online Application System – Created a web platform for trainer application, validation, and tracking with workflow automation and real-time email notifications for transparency and accuracy.
- TESDA Region VII Official Website – Designed and deployed a modular, SEO-optimized website using Next.js and TailwindCSS with dynamic content management and cloud hosting integration.

Leadership & Activities

TESDA Regional Operations Division

Lead Developer / Systems Analyst

October 2023 - Present

- Currently leading the development and improvement of internal systems including the NTTC Monitoring System, streamlining certificate validation and data tracking across provinces.
- Collaborated with key offices to digitalize manual processes, improving efficiency and reducing reliance on external firms.

Capstone Project – Bachelor of Science in Information Technology

- Led a team in conceptualizing, designing, and deploying an eCommerce Project called "MetaGalleria"
- Supervised system architecture, coding standards, and integration, ensuring timely delivery and functionality.
