Full Stack Web Developer and Systems Architect specializing in Next.js, React, Node.js, Supabase, n8n, and AI Automation. I design and deploy scalable systems that streamline operations through advanced API integrations, automated workflows, and intelligent data pipelines. My focus on architecture and strategic problem-solving enables me to deliver end-to-end solutions that enhance efficiency, reduce costs, and create measurable business impact.

Experience

AI/API Automation Specialist (Full Stack Developer)

Simple.biz / Gridline Analytics – New York, USA

November – Present

Architected and developed scalable web solutions and AI-driven automation systems that transformed business operations and client delivery using Next.js, React, Node.js, n8n, and modern CMS platforms. Delivered intelligent, automated solutions that enhanced efficiency, reduced manual processes, and improved client outcomes.

- **Advanced API Integration** – Skilled in advanced API integrations, building reliable data pipelines that automate workflows, sync systems, and ensure data accuracy. (Python)
- **AI & Automation Integration** – Implemented intelligent automation workflows using n8n to streamline content generation, data processing, and system operations.
- **System Architecture for Web Design Firm** – Designed and built scalable infrastructure and technical frameworks to support agency operations and client project delivery.

I.T. Systems Developer

TESDA Regional Operations Division – Cebu, Philippines

March 2023 – November 2025

Led full-stack development of multiple large-scale digital systems that modernized organizational workflows using Next.js, React, Node.js, and Supabase. Delivered end-to-end digital transformation initiatives that eliminated reliance on external contractors, saving significant time, money, and resources. Key projects included a Performance Analytics Dashboard for real-time metrics visualization with automated data aggregation and role-based access control, a Document Management System featuring cloud-based routing and approval with digital signatures, version control, and audit logging, an Online Application & Tracking System with workflow automation and real-time notifications, and an Official Organization Website with SEO optimization, dynamic content management, and cloud hosting integration.

Education

St. Cecilia's College

Bachelor of Science in Information Technology
