Springwoods, Maple Street • Minglanilla, Cebu 6046 • devkane2343@gmail.com • 0920-519-6661

Full Stack Web Developer and Systems Architect specializing in Next.js React, Node.js, Supabase, n8n, and AI Automation. I design and deploy scalable, production grade production-grade systems that streamline operations through advanced API integrations, automated workflows, and intelligent data pipelines. What sets me apart is my ability to immerse myself in a client's business — understanding their operations, constraints, and goals — before a single line of code is written. This cross-domain thinking, spanning development, business logic, and systems architecture, allows me to deliver end-to-end solutions that don't just work technically, but drive real operational change: enhanced efficiency, reduced costs, and measurable business impact.

Experience

Automation Workflow Specialist

Powerhouse Ventures Ltd. — Sydney Australia

April — Present

Maintained and optimized automation-driven systems for an investment and bidding operations company using Attio, Softr, n8n and document automation platforms. Improved bidding workflows, streamlined operations, and developed scalable internal tools while leading the development of a custom CRM tailored for investment and bidding management. Utilized AI-assisted development tools including Claude to accelerate development and automation workflows.

- Advanced Workflow Automation — Built and maintained automation workflows using n8n for bid tracking, notifications, and operational processes.
- SaaS & API Integration — Managed integrations across Attio, Softr, and internal systems to improve workflow efficiency and data accuracy.
- Internal Operations Tools — Developed internal dashboards and workflow tools for bidding and investment operations management.
- Custom CRM Development — Currently developing a custom CRM platform for investment tracking, bidder management, and workflow automation.
- AI-Assisted Development — Utilized AI tools including Claude to assist with development, debugging, and rapid prototyping.

AI/API Automation Specialist (Full Stack Developer)

Simple.biz / Gridline Analytics — New York, USA

November — Present

Architected and developed scalable web solutions and AI-driven automation systems that transformed business operations and client delivery using Next.js, React, Node.js, n8n, and modern CMS platforms. Designed and built an end-to-end Billing System for a Truck Fleet Company, handling invoice generation, trip-based billing logic, and fleet-wide payment tracking — replacing a previously manual, error-prone process with a streamlined digital workflow. This required going beyond pure development: deeply understanding the client's business operations, adapting to domain-specific requirements in taxation, accounting principles, and fleet management, and thinking from a managerial perspective to ensure the system reflected real-world business logic — not just technical specs. Delivered intelligent, automated solutions across multiple industries that enhanced operational efficiency, eliminated redundant manual processes, and consistently improved client outcomes at scale.

- **Advanced API Integration** — Skilled in advanced API integrations, building reliable data pipelines that automate workflows, sync systems, and ensure data accuracy. (Python)
- **Built a Custom HRIS** — Designed and Built a Custom HRIS for the company that will handle Payroll, Attendance, Orphanage Budget, Gift Tracker, Employee rates and Profiles and etc.

- **AI & Automation Integration** – Implemented intelligent automation workflows using n8n to streamline content generation, data processing, and system operations.
- **System Architecture for Web Design Firm** – Designed and built scalable infrastructure and technical frameworks to support agency operations and client project delivery.
- **HIPAA-Compliant Workflow Migration** – Leading the end-to-end migration of existing Zapier workflows to HIPAA-compliant infrastructure, auditing each workflow for data handling risks and ensuring full regulatory compliance before and after migration.
- **Automated Workflow Scoring & n8n Migration** – Built a custom automation to evaluate and score all Zapier workflows based on complexity, compliance risk, and migration priority, then systematically rebuilt and transitioned them into n8n for a self-hosted, HIPAA-compliant automation environment.

I.T. Systems Developer

TESDA Regional Operations Division – Cebu, Philippines

March 2023 – November 2025

Led full-stack development of large-scale internal systems using Next.js, React, Node.js, and Supabase — eliminating reliance on external contractors and delivering significant cost and time savings.

- **Performance Analytics Dashboard** – Real-time metrics and role-based access for organizational performance tracking.
- **Document Management System** – Cloud-based approvals, digital signatures, and full audit logging.
- **Online Application & Tracking System** – Workflow automation with live status notifications for applicants and staff.
- **Official Organization Website** – Public-facing site with SEO optimization and dynamic content management.

Education

St. Cecilia's College

Bachelor of Science in Information Technology

Skills

Back-End: Next.js, Python, Node.js, PHP, Laravel, Supabase, Firebase **Front-End:** React, Next.js, Vite, TailwindCSS
Languages: TypeScript, JavaScript, Python, PHP, SQL **Deployment:** Vercel, Cloudflare, Azure **Automation:** n8n, Zapier
Productivity & Collaboration: Monday.com, Microsoft Teams, Google Workspace, Bitrix24 **AI Tools:** Cursor, Claude CLI, SoftR, Attio, Docsautomator

Portfolio: kanereroma.vercel.app
